

Mahidol Vivax Research Unit (MVRU) is searching for a Ph.D. level researcher to fill a Faculty position (Lecturer/Researcher 1) at the Faculty of Tropical Medicine, Mahidol University, Bangkok Thailand.

Established in 2011, MVRU is part of the Malaria Excellence Center at the Faculty of Tropical Medicine, Mahidol University. Our primary research focus is on *Plasmodium vivax*, the most common human malaria parasites outside Africa. Current research areas include malaria epidemiology and transmission, parasite biology, drug and vaccine development. The established field sites, strong collaborative network with international partners, and a large archive of well-documented field samples provide excellent research opportunities in malaria and other tropical diseases.

Candidate qualifications:

- 1) Ph.D. in biomedical sciences or related field
- 2) Postdoctoral experience
- 3) Preferred expertise in immunology, vaccine development, mathematical/statistical modeling of disease or vector biology
- 4) Good command of English

The successful candidate is expected to fulfil the role of a primary investigator including grant seeking, leading independent projects, student training, and writing and communicating manuscripts for publication.
