

## ACKNOWLEDGEMENTS

The editors would like to express their sincere appreciation to the Infectious Disease Association of Thailand (IDAT) and the Pediatric Infectious Disease Society of Thailand (PIDST) for organizing the informative Short Training Course on Adult Dengue from August 6 to 8, 2014 in Thailand, and their kind support in the publication of these proceedings. We are also grateful to the invited course speakers and the authors of these proceedings for contributing their time, experience, and knowledge.

The editors would also like to thank the World Health Organization (South-East Asia Regional Office) for supporting the delegates to participate in the aforementioned course.
