02 What is Cover Letter?

Cover Letters are Important

Roles and Purpose of Cover Letter

- It takes some time to write effective cover letters with strong, clear, and persuasive messages.
- Submitting manuscript without or with a poor cover letter can be a disservice to the paper.

- It's your chance to talk to the journal handling editor
- Tell him/her why your manuscript is special and worthwhile to be published
- Tell him/her why your manuscript is original, useful, and contribute meaningful knowledge to the journal's field.
- Tell him/her what is your research question and mention important results.
- Tell him/her why this journal and your manuscript are a good fit.

Tip: See Aims and Scope of the journal.

Cover Letters are Important

Do and Don't

- Don't summarize the manuscript or abstract
- Be funny and use big words
- Overclaim or inflate your findings
- Write as details as possible
- Finish then submit it

Tip: Check journal's website

- Highlight how your paper fits with the journal's aims and scope
- Be polite, formal, and direct to the point
- Be honest and highlight the claims you are making
- The letter should be on one-side of a sheet of paper; 12-point Times or Areal.
- Don't forget to check the spelling, especially the editor's name.

Check for journal's details

03 Anatomy of Cover Letter

Cover Letters are compositing of ...

Essential components

- Stress that the manuscript is original
- If part of it has been published as a pre-print or poster, please give clear details.
- Mention type of paper you want to publish
 - Research paper
 - Review
 - Case report
 - Etc.
- Mention that all co-authors have given their approval to submit the manuscript and have completed a conflict-of-interest form, compliance with ethical practices, etc.
- (If the journal doesn't ask for reviewer suggestion during submission) List a few referees with their email address, and institutional details
- Suggest people you wouldn't want to review your manuscript as they would be conflicted.

Tip: [How to use the Reviewer Recommender on Editorial Manager](#)

Few discoveries transform a discipline overnight, but biologists today can manipulate cells in ways never possible before, thanks to a peculiar form of prokaryotic adaptive immunity mediated by clustered regularly interspaced short palindromic repeats (CRISPR). From elegant studies that deciphered how these immune systems function in bacteria, researchers quickly uncovered the technological potential of Cas9, an RNA-guided DNA cleaving enzyme, for genome engineering. Here we highlight the recent explosion in visionary applications of CRISPR-Cas9 that promises to usher in a new era of biological understanding and control.

Professor H. D. Schmidt
School of Science and Engineering
Northeast State University
College Park, MI 10000
USA

January 1, 2008

Dear Professor Schmidt,

Enclosed with this letter you will find an electronic submission of a manuscript entitled "Mechano-sorptive creep under compressive loading - a micromechanical model" by John Smith and myself. This is an original paper which has neither previously nor simultaneously in whole or in part been submitted anywhere else. Both authors have read and approved the final version submitted.

Mechano-sorptive is sometimes denoted as accelerated creep. It has been experimentally observed that the creep of paper accelerates if it is subjected to a cyclic moisture content. This is of large practical importance for the paper industry. The present manuscript describes a micromechanical model on the fibre network level that is able to capture the experimentally observed behavior. In particular, the difference between mechano-sorptive creep in tension and compression is analysed. John Smith is a PhD-student who within a year will present his doctoral thesis. The present paper will be a part of that thesis.

Three potential independent reviewers who have excellent expertise in the area of this paper are:

Dr. Fernandez, Tennessee Tech, email1@university.com
Dr. Chen, University of Maine, email2@university.com
Dr. Singh, Colorado School of Mines, email3@university.com

I would very much appreciate if you would consider the manuscript for publication in the International Journal of Science.

Sincerely yours,

A. Professor

What is in the response?

The message from the editor and the reviewer

- Rejected without review (desk reject)
- Accept
- Minor revision
- Major revision
- Reject

- Send thank you note and find new target journal
- Send thank you note and cake for the whole lab 😊
- Worth to publish but need some amendments
Doesn't guarantee accept
- May be worth to publish but significant textual
modifications and/or experiments are needed.
- Discuss with the team and plan for the response.

03 How should I response?

What should I do?

Using CALM method

C: *Comprehend* (keep your cool!)

A: *Answer* (amend or advocate!)

L: *List* (make a list...check it twice!)

M: *Mindful* (make it easy for the editor – they will appreciate it!)

What should I do?

C: Comprehend

- Stay calm
- Carefully read the comments
- Take a break
- Digest
- Ask someone else to read the comments
- Make a list of comments and plan for the action

Original Submission

Recommendation

Minor Revision

Comments to the author

This is a cross-sectional study aims to investigate how widely the Surgical Safety Checklist (SSC) is used by frontline medical professionals across the globe and identify potential barriers to implementation utilizing social networks. Overall, this is an interesting study demonstrating wide but variable use of the WHO SSC. This presents a need to improve education in under- and post-graduate training programs, especially in the low- and middle-income countries.

Introduction:

The author clearly demonstrated the background of SCC. However, it would be better if they could include what SCC checklist involves, to improve the understanding of the readers.

The aim of the study is clear, but the hypothesis is not stated.

Could the author provide the STROBE checklist?

Methods:

One organization, the 'Schoolofsurgery.org' is used - it would be helpful if the author could describe how popular and/or well known this organization is, e.g. how many followers does it have? Who are the main targets of this organization?

Also, why did the author choose to use this particular organisation?

It is not clear whether the survey was done for only one day or for a month. Also, why from 0800 to 1800? People often use their SNS during the night. The author collected the data from the globe - then why did not allow the time for 24hrs, considering the time differences between countries?

Has the author investigated whether participants 'never used' or 'never heard of' SCC? If not, why?

Results:

Use of graphs, e.g. clustered bar chart, is recommended.

Which countries showed the highest response rate? Listing all 65 countries is ideal - at least top 5 countries should be stated, as well as their compliance percentages.

Discussion:

Good and clear discussion about the limitation of the study. It would be better if author could also state that people who finished the surgery are likely to have a positive experience or interest with SCC.

Author stated that 'there is growing conflicting evidence of the impact of the surgical safety checklist across different global healthcare systems.' - what those evidences suggest?

- I must thank him for positive comments 😊

- Many useful suggestions to improve this manuscript including:
 - Add graphs
 - Include data
 - Describe more about

- Many questions I need to clarify including:
 - The methodology regarding
 - The measurement of

What should I do?

A: Answer

- Start with easy one
- Then the minor comments
- Then the major comments
- List out all evidences you need

Response to reviewers' Comments

Title: Etanercept may induce neurosarcoidosis in a patient treated for rheumatoid arthritis.
MS: 1074799946108481

Reviewer 1: Raffaele D'Amelio

Comment 1
The Authors analysed data derived by studies with SGLT2 or placebo alone or in combination with other anti-diabetic drugs. The combination therapies could have an impact on the results of the meta-analysis. A forest-plot for subgroups (mono-therapies vs combined/placebo therapies) would be important in the view of the clinical management of the patients.

Response to comment 1
First of all, the authors would like to acknowledge the reviewer for taking his/her time to review and forward valuable comments to enrich the content of the manuscript. To address the concern on the possible clinical outcome variations when SGLT2 inhibitors used as monotherapy or in combination with other anti-diabetic drugs, we have conducted subgroup analyses (SGLT2 monotherapy vs Combination with other antidiabetic drugs) (**Additional Fig 1 – Additional Fig 4**). However, the therapeutic outcome of SGLT2 inhibitors when used in combination with other anti-diabetic drugs was not significantly different from SGLT2 inhibitors monotherapy (Result section: paragraph 2).

Comment 2
SGLT-2 inhibitors were used at different doses. A dose-response meta-analysis could give interesting additional data (Orsini N, Li R, Wolk A, Khudyakov P, Spiegelman D (2012) Meta-analysis for linear and nonlinear dose-response relations: examples, an evaluation of approximations, and software. Am J Epidemiol 175: 66–73).

Response to comment 2
This is a well taken comment; for every SGLT2 inhibitors we have conducted several meta-regression analyses to determine the change in therapeutic outcomes with a change in doses of SGLT2 inhibitors (Result section: paragraph 2) (**Additional Fig 5 – Additional Fig 10**). In any of the meta-regression analyses increase in dose was not significantly associated with an increase in clinical response or adverse events.

- ☐ Address the reviewer
- ☐ Mention manuscript ID
- ☐ Response to all questions
- ☐ Add references, data, sentences per suggestions
- ☐ Explain and clarify the points

Tips

Useful phrases and other tips that the reviewer will appreciate

- We agree with the referee that , however
- The reviewer is accurate to point out, but
- Although we agree with the reviewer on,
- It's true that, yet
- We acknowledge that our paper might have been, nevertheless
- We also disappointed by the
- We agree that this is an important point that requires further research

- X Don't forget to address to the reviewers
- X Don't forget to include manuscript title and ID
- X Don't' resubmit the same version elsewhere :
the same reviewer may review your work!
- ✓ Always use the reviewer's comments

What if

When these things have happened.

- Two reviewers disagree
- The reviewer is wrong
- Rude reviewers 😞
- I don't understand the comments

- Don't play them off. You can ask the editor.
- Don't agree with them. Be polite and explain. If it doesn't work, talk to the editor.
- Contact the editor.
- Ask the reviewer to clarify. It's ok.

Rejection is not a red light, but a beacon that shine light to better path of success.

to [redacted]

Ms. Ref. No. [redacted]

Title: [redacted]

International Journal of Research in Marketing

Dear Dr [redacted]

Thank you for submitting your paper entitled [redacted] to the International Journal of Research in Marketing.

When a paper is first submitted to IJRM, the editorial team consisting of the editor-in-chief and/or co-editor reviews the paper carefully to make the assessment of (a) whether it has an appropriate fit with the editorial objectives of IJRM, (b) whether the paper is developed well enough to get into the process for a full review, and (c) the appropriate course of action for the paper to be developed further in the most efficient way. This assessment is necessary because we receive a large number of submissions and do not have the reviewer resources and the bandwidth to provide detailed reviews on each paper. If the initial assessment is not favorable we return the paper to the authors encouraging them to develop it further and/or find other suitable avenues for publication, to save time for all concerned. I am sure, as authors, you will appreciate the quicker turnaround.

I read through your paper carefully and based on my evaluation that paper is not a good fit for IJRM. The reason for this evaluation is as follows. While understanding [redacted] is a relevant marketing topic, the paper is not making any incremental contribution to this literature in terms unearthing new theoretical insights. Also, this is specific to segment and food category which is not easy to generalize. In addition, the use of survey for measuring independent and dependent variables is beset with common method bias. Given the current state of the paper if I send out the paper for review, it will not survive the review process. I am sure there are other journals focused on energy markets which may welcome this type of research but given the lack of fit with IJRM, I do not want to waste your time.

I am sorry that my decision on your paper is not positive as much as we want to be encouraging and supportive. While I realize this outcome is not what you wanted, I hope you appreciate receiving timely feedback so that you can seek out other publication outlets that may provide a better fit for your paper.

Thank you for submitting your research to IJRM and we hope that the outcome of this specific submission will not discourage you from submitting future manuscripts to IJRM.

Yours sincerely,

P. K. Kannan, Ph. D.
Editor-in-Chief
International Journal of Research in Marketing

Peer review report is not a blemish, but an effort trophy for both author and reviewer.
