#### Signature Verification Preferences

Verify signatures when the document is opened

When document has valid but untrusted signatures, prompt to review and trust signers

Verification Behavior

When Verifying:

- O Use the document-specified method; prompt if unavailable
- Our Use the document-specified method; if unavailable, use default method

O Always use the default method:

Adobe Default Security

Verification Information

saving signed PDF:

Always

O Never

Require certificate revocation checking to succeed whenever possible during signature verification

Use expired timestamps

Ignore document validation information

#### Verification Time

Verify Signatures Using:

- Time at which the signature was created
- Secure time (timestamp) embedded in the signature

O Current time

Windows Integration

Trust ALL root certificates in the Windows Certificate Store for:

✓ Validating Signatures

Validating Certified Documents

Selecting either of these options may result in arbitrary material being treated as trusted content. Take care before enabling these features.

Help

Automatically add verification information when

O Ask when verification information is too big
